OBJECTIVE

Aspiring Software Engineer with hands-on experience building REST APIs, relational database systems, and scalable backend applications. Proficient in Python, Node.js, SQL/NoSQL databases, and good programming practices including test-aware development. Eager to contribute to high-impact retail commerce products and grow within a collaborative, curiosity-driven engineering team.

TECHNICAL SKILLS

Backend & APIs: Node.js, Express.js, REST APIs, JWT, BullMQ, Python

Databases: MySQL, PostgreSQL, SQLite, MongoDB, Redis — schema design, query optimisation

Core CS: DSA, OOP, DBMS, SDLC, Operating Systems, Linux/Unix CLI

Testing & Practices: API testing (Postman), input validation, pytest (basic), TDD principles, Git branching workflows

Frontend & Tooling: HTML5, CSS3, Streamlit, VS Code, Git, GitHub, Google Colab, MySQL Workbench

AI/ML (supplementary): TensorFlow, Keras, Scikit-Learn, NLP, LLMs, OpenAI API, Groq API, Pandas, NumPy

Languages: Python, JavaScript, C, SQL

PROJECTS

CryptoLedger — Real-Time Trade Analytics & P&L Engine

2024

Node.js, Express, PostgreSQL, Redis, BullMQ, JWT, REST APIs, Git

- Engineered a production-style REST API backend simulating a crypto exchange — trade ingestion, fund ledger, and real-time P&L computation using FIFO accounting across 100K+ simulated trade records.
- Built automated daily report pipeline using BullMQ job queues; implemented JWT + API key dual-auth with role-based access for user vs admin analytics endpoints; applied Postman-based API testing and structured error handling throughout.

Smart ATS — AI-Powered Resume Analyzer

2024

Python, Streamlit, Groq API, LLaMA 3.3-70B, PyPDF2

- Built an end-to-end web application that evaluates resumes against job descriptions using LLaMA 3.3-70B via the Groq API, with structured JSON output and response parsing.
- Implemented PDF text extraction with PyPDF2, prompt engineering for structured output, and a Streamlit UI displaying JD match percentage, missing keywords, and a profile summary.

Music Recommendation System

2023

Python, Pandas, Scikit-Learn, NLTK, TF-IDF, Streamlit

- Built a lyrics-based content-filtering system using TF-IDF vectorisation and cosine similarity; preprocessed data with NLTK (stopword removal, tokenisation) and Pandas.
- Deployed an interactive Streamlit web app for public use; codebase documented and published on GitHub.

EDUCATION

B.Tech in Computer Science Engineering | Pranveer Singh Institute of Technology Oct 2023 – Jul 2027

CGPA: 71.47% | Kanpur, India

Senior Secondary (Class XII) | Dr. Virendra Swarup Education Centre

Apr 2023

71% | Unnao, India

Secondary (Class X) | Dr. Virendra Swarup Education Centre

Apr 2021

88.66% | Unnao, India
